- ASP.NET and ASP.NET Core Request Processing

.NET 5: One .NET vision

- Single SDK, one BCL, unified toolchain
- Cross-platform native UI
- Cross-platform web UI
- Cloud native investments
- Continue improvements in speed, size, diagnostics, Azure services

Evolution of ASP.NET Core

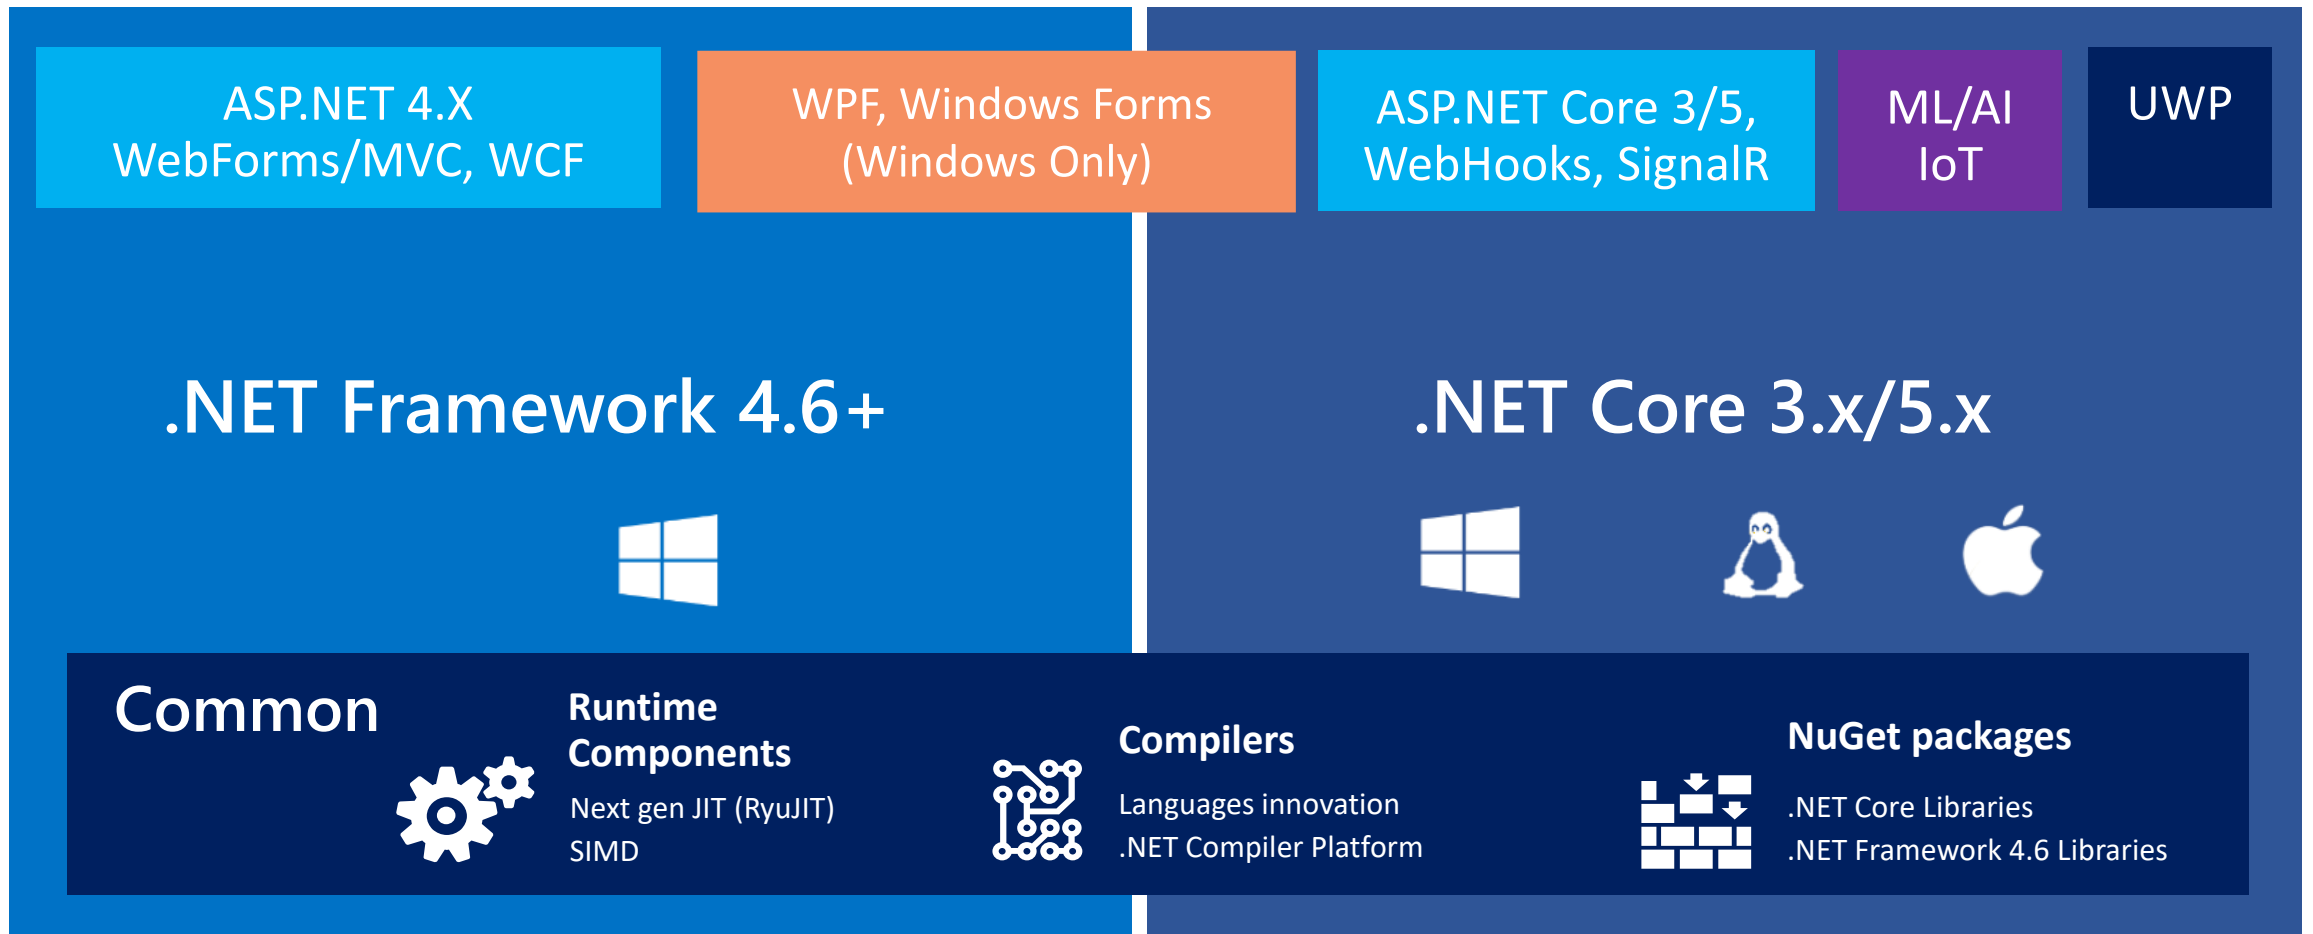

What is ASP.NET Core?

- An open-source and cross-platform framework
- Runs on .NET Core or on the full .NET Framework till ASP.NET Core 2.2
- A unified framework for building web UI and web APIs
- Built-in dependency injection
- New light-weight and modular HTTP request pipeline
- Ships entirely as NuGet packages
- Built-In support for SPA with client-side frameworks like Angular, React, Vue

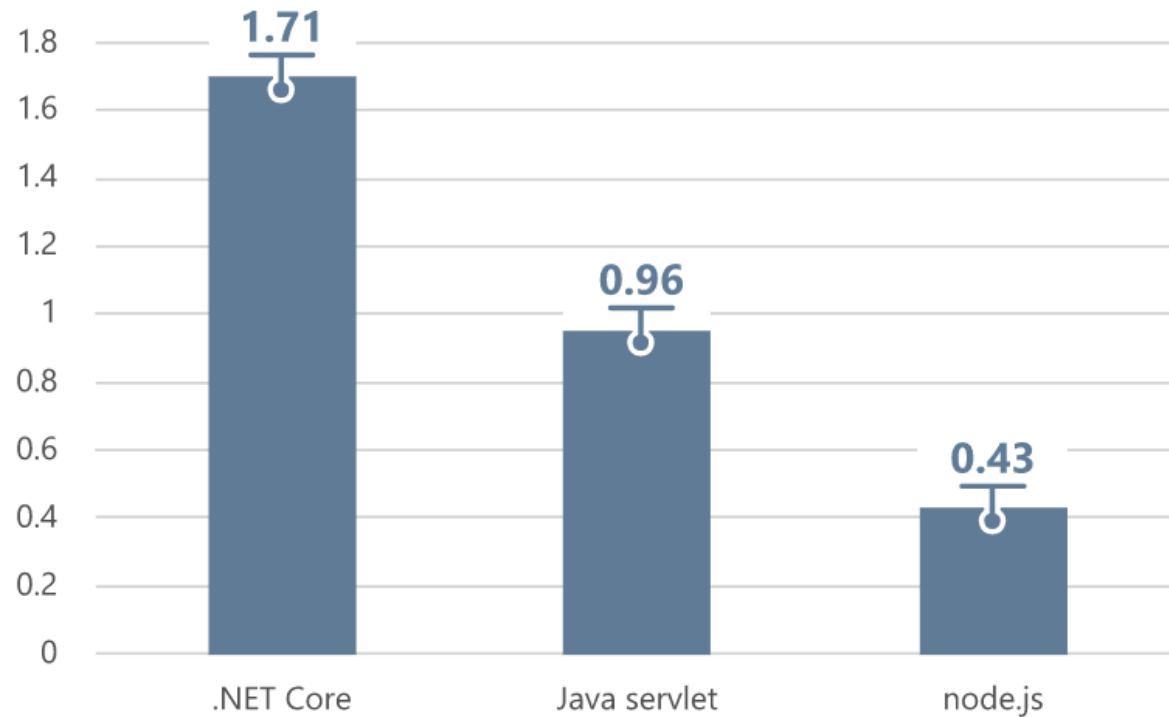

What is ASP.NET Core?

- Build modern cloud based applications, such as :
 - REST APIs or gRPC services
 - Single Page Applications with Blazor
 - Server Rendered web applications with Razor Pages
 - Real time web applications with SignalR
- Serve **2300%** more requests per second as compared to **ASP.NET 4.6**

ASP.NET Core 3.x/5.x Architecture

ASP.NET Core Performance Benchmarks

Request / second (millions) based on official tests available at [TechEmpower Round 14](https://www.techempower.com/round-14).

ASP.NET Core Application Anatomy

- Everything starts from Program.cs, Main Method
- ASP.NET Core apps require a Startup class
- No more Global.asax
- No more Web.Config requirement
- No more modules and handlers
- Cross-platform Kestrel web server

ASP.NET and ASP.NET Core Request Processing
